INDUSTRIAL TRAINING SERVICES LTD

Industrial Training Services Ltd was established in 1989. We deliver a complete and versatile training solution for a wide range of industries. We are passionate about providing professional advice, training and support services.

We believe that developing the skills of workers in all industries is crucial to the health of the UK economy. That's why we are working with employers to make sure all employees have the right skills in the right place, at the right time.

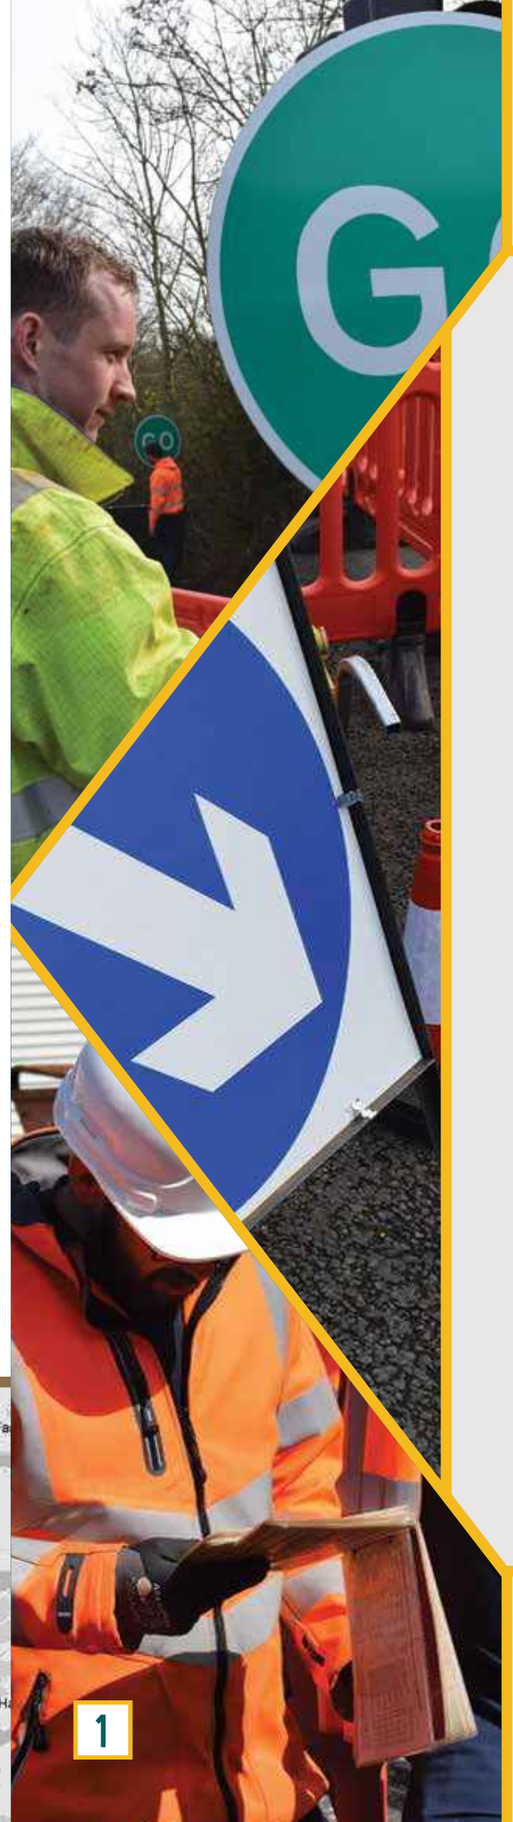
We work pro-actively with companies to help improve skills, increase their competitive edge and respond to the many challenges faced by employers and employees alike. We boast a highly qualified and full-time employed team that deliver safe, professional, fully accredited qualifications to the UK workforce.

As an ISO9001:2008 registered business; the company is favoured by most of the major construction members, government departments, airports, local authorities, large PLC's and many private companies both large and small.

Our course delivery spans from apprenticeships, right through to managerial training. Our customers are supported in a number of ways e.g.

- **General support and guidance**
- **Training grants**
- **Refresher course reminders**
- **Course accreditations**
- **Preparation of bespoke courses**
- **Delivery programmes supported by risk assessment**

PERFECTLY PLACED IN WICKFORD AND BILLERICAY



STREETWORKS
TRAINING
TESTING

WHO NEEDS STREETWORKS?

Streetworks training courses are designed for utilities contractors and authorities working on or around highways.

STREETWORKS TRAINING

Whether operatives are setting up traffic lights and signs or excavating and reinstating the highway; an appropriate training certificate is required for one person working in every gang. This work must also be supervised by a qualified supervisor.

On completion of the course; successful operatives and supervisors will be issued with City & Guilds certificates and SWQR (StreetWorks Qualification Register) cards.

Individual units can be completed to cater for differing requirements. Unit 2 or 10 are the only standalone units where a SWQR card can be awarded.

REASSESSMENTS

All operatives and supervisors will need to undergo re-examination every 5 years to renew their SWQR card. Industrial Training Services offer a re-assessment examination training day prior to assessment, to ensure the best possibility of achieving the standards required on the day.

City & Guilds
APPROVED CENTRE

CPCS
EXPERIENCED TESTING
FOUNDATION COURSES

HEALTH & SAFETY TESTING

The CSCS Health, Safety and Environment test must have been taken and passed within the past two years, prior to CPCS testing. This testing is conducted at DVLA test centres on touch-screen terminals.

CPCS THEORY TEST

CPCS theory tests are generally conducted at our CPCS test centre. Operators are asked a series of questions in a random order. The number of questions varies from category to category. The questions and answers are recorded for CPCS monitoring purposes.

PRACTICAL TEST

Most plant testing must be completed at our CPCS test centre. Test duration varies from less than an hour to over 3 hrs dependant on the category. There are some categories which are tested on site - which we are able to conduct.

These tests are conducted under strict guidelines set out by CPCS. Regular CPCS monitoring visits are made to CPCS test centres to ensure they are complying with the scheme rules.

OUR CPCS CENTRE

With our own dedicated training and testing facility, and our own plant machinery - ITS have the flexibility to provide varying levels of training. CPCS is the most widely recognised scheme. With our team of highly experienced, CPCS accredited instructors, we pass on the savings of running our own site to our customers.

NOVICE COURSES

Novice operators will need to undergo basic CPCS training. On successful completion of their basic training; operators will take a theory and practical test. If they are successful in both elements, the operator will receive a RED CPCS card.

After a period of practical experience the operator can register to start their NVQ. Once the NVQ has been completed the operator can apply for a BLUE CPCS Card.

TRAINING OFFERED

- 360° Excavators
- Forward Tipping Dumpers
- Telescopic Handler
- Ride-on Roller
- Slinger Signaller
- Dozer
- Dump Truck
- Hoist
- Forklift Truck
- Petrol Cutting-off Saws
- Lorry Loader
- Crawler Crane
- MEWP
- Loading Shovel
- Agricultural Tractor

HSE REQUIREMENTS

All training and testing of operators is in line with the Lifting Operations and Lifting Equipment Regulations. Our training is suitable to satisfy HSE PUWER (Provision and Use of Work Equipment Regulations) requirements.

ITS TRAINING

ITS offer a number of training schemes for lifting operations. RTITB is the most commonly accepted standard within industrial, warehouse and distribution industries. CPCS and NPORS are widely used within the construction industry.

TRAINING OFFERED

- Mobile Cranes
- Crawler Cranes
- Wheeled Cranes
- Self-erecting Tower Cranes
- Overhead Cranes
- Lorry Loaders
- Excavator Lifting
- Underslung Loads
- Slinger Signaller
- Swinglift
- Hoist (goods & passenger)
- Crane Supervisor
- Appointed Person

LANTRA and EUSR training schemes are available too.
Training ratio and durations are dependent upon scheme and Health and Safety guidelines.

CONFINED SPACE TRAINING

Confined spaces can be deadly. Not only to people working in the confined space, but in an emergency - to those who try and rescue them without the proper training and equipment.

Confined space training courses are designed for those who are required to enter, supervise or manage confined spaces.

Our instructors have a wealth of knowledge and many years of experience, which enables them to deliver a practical hands-on approach to this subject. We can provide all of the specialised equipment required for the course.

COURSE CONTENT

- Past case histories of confined space deaths
- Confined space regulations
- PUWER regulations
- EH40
- What is a confined space?
- Recognition of confined spaces
- Emergency procedures including the initiation of an emergency response
- Gas detection equipment and gas properties which you are liable to encounter
- Apparatus checking procedures
- Escape breathing apparatus, either compressed air, or chemical oxygen
- Use of harnesses, winches and tripods
- Inspection of equipment
- Identifying defects and dealing with malfunctions
- Safe systems of work and permits
- Practical test

MATERIAL HANDLING

All training and testing of operators is in line with the Rider-operated Lift Truck Approved Code of Practice

ITS offer a number of schemes for industrial forklift truck training. RTITB is the most commonly accepted standard within industrial, warehouse and distribution industries. All of our forklift instructors are RTITB accredited.

TRAINING OFFERED

- **RTITB Forklift Instructor Training and Testing**
- **Counterbalance Forklift Trucks**
- **Reach Truck**
- **Rough Terrain Forklift**
- **Telescopic Handler**
- **Container Handling Units**
- **Side Loaders**
- **Order Pickers**
- **Bendi Trucks**
- **Pallet Trucks**
- **Moffett (Lorry Mounted Forklift)**
- **Narrow Aisle**

LEVEL OF TRAINING

All candidates achieving the required standards will be awarded a certificate of basic training as approved by the Health and Safety Executive.

Trainee to instructor truck ratios are based on the Health and Safety Code of Practice guidelines:

3 trainees | 1 instructor | 1 truck

Approved schemes available: **CPCS, NPORS, LANTRA and EUSR**

DELIVERY

Approximately 80% of the training delivered by ITS is on-site, commonly known as in-house training. There are numerous advantages to this.

BENEFITS

COST SAVINGS

Cost per candidate is typically lower than public scheduled courses due to the fact that ITS only has to send an instructor to you rather than set up a training environment themselves.

We recommend that clients maximise the number of candidates' per-course to achieve maximum benefit and savings.

In addition, you don¤t pay for the travel and possible accommodation costs to get your delegates to the training centre. Also, with fuel prices so high and training centres often being in the large towns where accommodation is generally costly, on-site training can offer many benefits.

FOCUSED TRAINING

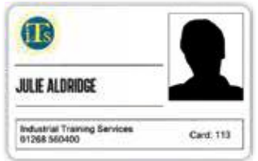
Running an in-house training course for a single client can generally allow for the training to be focused on the specific needs and skills that are relevant to your business.

BASIC CERTIFICATES

Our clients have the option upon successful completion of basic training to have a certificate issued within the cost of the course. Additionally, we offer a trained operator card at a small fee.

RTITB ACCREDITED
SETTING THE STANDARD

NORS



OCCUPATIONAL SAFETY TRAINING

As one of the UK's leading safety training organisations we offer a wide range of occupational safety training courses.

Our highly qualified instructors are our biggest asset. Not only are they health and safety experts, they have a wealth of experience within the industry and engage with the delegates to get the very best results.

If you think safety training is expensive, you certainly cannot afford an accident. Unfortunately, year on year, employees from all sectors are injured in accidents that could have been avoided by a level of basic training.

BENEFITS OF TRAINING

- **Reduced costs**
- **Reduced risks**
- **Lower employee absence and turnover rates**
- **Fewer accidents**
- **Reduced threat of legal action**

Many courses fall into the category of occupational safety training - such as:

- **Abrasive Wheels**
- **First Aid Training**
- **Fire Extinguisher Training**
- **Fire Marshal**
- **Manual Handling**
- **Health And Safety Awareness**
- **Asbestos Awareness or Non-Licensed Removal**
- **COSHH**
- **Behavioural Training**

CITB COURSES

ITS have a long history of delivering construction qualifications. These courses can be delivered on our customers' premises or at our dedicated training centres.

MANAGEMENT

SMSTS (Site Manager Safety Training Scheme)
5 day course
2 day refresher

SSSTS (Site Supervisor Safety Training Scheme)
2 day course
1 day refresher
